Damian Igbe, PhD

AI • Cybersecurity • Cloud Operations Speaker

Turning AI into practical, human-led workflows for security and cloud teams.

About Damian

Damian Igbe, PhD is an AI, cybersecurity, and cloud operations expert who helps organizations move from AI experimentation to operational impact. He specializes in integrating AI into security investigations, cloud security reviews, and DevSecOps workflows in ways that are structured, accountable, and repeatable. He is also a Kubestronaut, having earned all five Kubernetes certifications. His deep cloud-native expertise allows him to connect AI and security practices directly to modern distributed systems running at scale.

Signature Technology Talks

- AI Security Copilot: From Prompt to Production

- From Alert Overload to AI-Assisted Analysis

- AI for Cloud Security & DevSecOps Workflows

- AI for Kubernetes: Understand, Secure, and Operate Cloud-Native Systems

Additional Keynote (Leadership & Performance)

Endurance Mindset: Building Resilience for High-Stakes Work
A keynote translating lessons from marathon running into practical strategies for sustainable

performance, resilience under pressure, and long-term success. Ideal for leadership audiences, corporate offsites, and conferences seeking a human, inspirational perspective.

Audience Takeaways

- Repeatable AI-assisted workflows with human validation

- Clarity on where AI helps most in security and cloud operations

- Strategies for resilience, consistency, and sustainable performance

- Improved communication from technical findings to leadership
