Damian Igbe, PhD
AI • Cybersecurity • Cloud Operations Speaker

Turning AI into practical, human-led workflows for security and cloud teams.

About Damian

Damian Igbe, PhD is an AI, cybersecurity, and cloud operations expert who helps organizations move from AI experimentation to operational impact. He specializes in integrating AI into security investigations, cloud security reviews, and DevSecOps workflows in ways that are structured, accountable, and repeatable. Damian is also a Kubestronaut, having earned all five Kubernetes certifications. His deep expertise in cloud-native platforms, microservices, and containerized environments allows him to connect AI and security practices directly to modern distributed systems.

Signature Talks

- AI Security Copilot: From Prompt to Production

- AI for Developers Beyond Code

- Designing Responsible AI Workflows for Security Operations

- AI for Kubernetes: Understand, Secure, and Operate Cloud-Native Systems

Audience Takeaways

- Practical AI use cases beyond code generation

- Repeatable AI-assisted workflow patterns

- Guidance on human validation and accountability

- Strategies for turning technical analysis into clear communication

Ideal Audiences

- Security engineers and SOC teams

- Cloud and DevOps professionals

- DevSecOps practitioners

- Security and engineering leaders
